UNICO^Φ

Φ Physis

True and respectful to the essential values of the organ tradition.

Today the main goal of the electronic organ is this: to respect the prestigious history of the classic organ while achieving a praiseworthy outcome in the present by using the most sophisticated digital technology available.

The CL organs form a new line of instruments by Viscount to answer the needs of the expert organist and the amateur musician, wisely blending the exclusive patented Physis technology with hand-crafting tradition and the attention to detail which have always been trademarks of Viscount Organs.

Conceived to provide the organist with the utmost sound quality and a vast range of functions, CL organs are flexible instruments that are capable of integration in almost any location, always giving an authentic timbre.

Thanks to the rich flexibility, these organs can be customized according to the personal taste and needs of the musician.

viscount®

Technology

CL6, CL4 and CL2 are two-manual organs – the result of the most advanced technology. For each stop, the user can select different voices stored in the internal memory; all the functions are readily available and easy to use through a back-lit visual control panel.

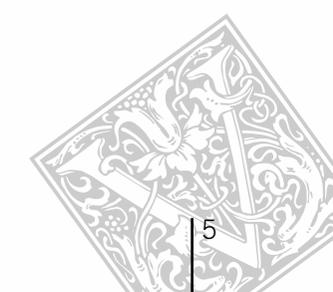

The three-channel internal amplifier (2x60 Watts and 1x100 Watts) produces the sound through five speakers, for a wide and warm sound.

The attention to detail is evident in the elegance of the solid-wood, polished casing which shows the hand-crafting skill of Viscount, and all the beauty and importance that a classic organ should have.

Through real-time, sophisticated algorithms for physical modelling – called Physis technology – the CL organs reproduce the real sound of the organ pipes with all their peculiarities, fine details and acoustic behaviour; just playing a few notes will demonstrate that the sound is not simply played, but real-time generated as a key is pressed, so as to achieve a natural progression of sound throughout the whole keyboard, as in real pipe organs.

The Viscount organs can be used at home, in concert halls or inside churches, and thanks to physical modelling technology, they give the unique feeling of a real organ.
